CHEA SOTHY: EFFECTS OF INTERVENTIONS TO REDUCE
RISK OF SEXUALLY TRANSMITTED DISEASES IN FEMALE
COMMERCIAL SEX WORKERS IN SIHANOUKVILLE,
CAMBODIA. THESIS ADVISOR: ROBERT SEDGWICK
CHAPMAN, MD, MPH. 90pp. ISBN 974-959936-5

The main purpose of the study was to assess the effects of interventions to reduce risk of
sexually transmitted diseases in commercial female direct sex workers in Sihanoukville,
Cambodia. In 1998 the interventions to reduce risk of sexually transmitted diseases in
commercial sex workers was piloted in the main seaport town of Sihanoukville. These
included health education campaigns, outreach and peer education, condom promotion
and distribution, and STD care provision. This study collected and organized secondary
data from various types of sources concerned with STD/HIV control program in
Cambodia. The study compared the data before, during and after interventions about rate
of condom use by commercial female direct sex workers and their clients, the STD
prevalence, and HIV prevalence. The results showed that the percentage of sex workers
reporting always using condoms with clients increased from 44% in 1998 to 96% in
2000. In addition, the number of condoms sold by Population Services International and
the rate of condom buying increased from year to year, especially from 1998 to 2000.
Moreover, the outcome indicators of this pilot project in Sihanoukville showed evidence
of reduction in prevalence of STD (syphilis and trichomoniasis) and behavioral change in
sex workers, i.e. increase condom use.

Drawing on experience from this pilot project, the National Center for HIV/AIDS,
Dermatology and STD has identified the interventions as a core strategy in its HIV/STD
prevention program, and has expanded these interventions to high-risk situations
throughout the country.

Field of Study: Health Systems Development
